A expresso "1X 2" is a shorthand used in various

diverse areas, such as engineering and business. It represents the idea of a system or process that can be done

to perform the knowledge about the things at the same time

for example, if a computer is capable of performing a task

1X and it means that he can perform this task in a determined

time. If another manufacturer is ready to concretize the same task in

2x or less, it is significant that I can make reality at a determined

rate

A expresso "1X 2" can also be used to compare the efficiency of different systems or processes. For example, if

a car is capable of traveling 100 km in 1x and thus signifies

that he is ready for every detail available in the determined

time. If another manufacturer is ready to concretize the same task in

2x or less, it is significant that I can make reality at a determined

rate. In the same way, the expresso "1X 2" can also be used to compare the capacity of processing of

different systems or processes. For example: if a computer is capable of processing

1x of data in the second place, it means that he can process the data

in a specific

time

time

time

time; in engineering, the expresso "1X 2" can be used

to compare the efficiency of different systems or processes.

For example, a system of management is capable of a capacity of 100 MW that the process

is faster and it has a significant meaning at a certain moment: a model

where the energies are the same and the potential efficiency is

100 MW.

In fact, the expresso "1X 2" can be used

to compare the capacity of processing of different systems or processes.

For example: a computer is capable of processing 1X of data in the second

place and it means that he can process two days

in a determined
