Like the Moonstone, the Poki comes #127819; with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6 #127819; USB-#26; MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you re out. It s #127819; actually the first thing that stood out when I was looking at the device . The Moonstone is still going strong #127819; with a friend of mine a year later.</p><p>The battery delivers a 90% conversion efficiency rating according to specs on the #127819; manufacturer s website. Most batteries go from the high 70 s to mid 80 s. You want to see a higher number as #127819; this is how much power gets delivered with the rest being lost in conversion.</p><p>The Poki can charge and recharge at #127819; 2.1amps. This means you re not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should #127819; be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of #127819; actual juice to spare. That should be enough for at least three complete charges from dead to full for any #127819; smartphone on the market today.</p><p>2.1 amp charging also means you re not going to spend ~7 hours charging a 3000mA phone #127819; from dead, more like an hour and a half if your phone
