

cassino online esporte da sorte

There are 9 squares involved with the 7, so $480 \times 9 = 4710$ other squares. These other squares contain the 92 other mines. So the number of grids with a 7 at a particular spot is $8(4710/92)$. That is out of a total of $(48) \times 10^7$

Probability of getting a 7 in Minesweeper - Math Stack Exchange : questions : probability-of-getting-a-7-in-mines...
We have $492556 = 125244$ ways for an easy grid to have an 8 somewhere. Out of the 1.88 trillion total easy grids, this gives a probability of about 610×10^{-12} . So, very rare indeed!
probability - How rare is it to get a $\$8$ in minesweeper
